

## UV Lamp - High Output 5 Pin 30" 185nm Standard

Series: 52885-TS30N

USD Price: Contact Aquafine

This standard high output 30" UV lamp uses 185nm TOC reduction and works with OptiVenn systems.

Standard lamps have been a mainstay of Aquafine UV systems for decades. Like all Aquafine UV lamps, they undergo a rigorous quality control inspection and testing program.

### High Output (HX) Lamp

High output lamps feature a higher UV intensity output. They are especially ideal for critical UV applications.

### Colorguard® UV Lamps

Field failure of lamps can go undetected, creating unacceptable bacteria counts and cause real problems. Aquafine's record is unmatched. The percentage of genuine Aquafine UV lamps which fail is less than .05% and Aquafine Colorguard UV lamps are exclusive to Aquafine, making mixing of different lamp types virtually impossible during change-out.

Specially manufactured with ceramic lamp bases, Aquafine Colorguard UV lamps offer advantages over non-ceramic material such as greater high voltage electrical insulation, superior strength, rigidity, improved temperature tolerance and are impervious to UV degradation.
